cleo publications in frontiers in marine science foreword josef aschbacher director of esa s earth observation programmes satellite data have drastically changed the view we have of the oceans covering about 70 of earth s surface oceans play a unique role for our planet and for our life but large areas remain unexplored and are difficult to reach since the 1980s earth orbiting satellites have helped to observe what is happening at the ocean surface sensors like czcs avhrr seawifs and modis provided the first ocean colour data from space starting in 2002 esa s medium resolution imaging spectrometer meris on board the environmental satellite envisat provided detailed information on phytoplankton biomass and concentrations of other matter in the global oceans these satellite observations laid the groundwork for studying the marine environment and how it responds to climate change and the research community has since delivered information on the variability of marine ecosystems part of this work is reflected in this stunning collection of peer reviewed publications presented at the workshop colour and light in the ocean from earth observation cleo held at esa s esrin site in Frascati Italy on 6-8 September 2016 the event attracted more than 160 participants from all over the world including remote sensing experts marine ecosystem modelers in situ observers and users of earth observation data scientifically the meeting covered applications in climate studies over primary productivity and ocean dynamics to pools of carbon and phytoplankton diversity at global and regional scales it also demonstrated the potential of earth observation and its contribution to modern oceanography looking to the future new satellites developed by esa under the coordination of the European Commission will further our scientific and operational observations of the seas with Sentinel 3a in orbit and its twin Sentinel 3b following in 2017 there is a new category of data available for operational oceanographic applications and climate studies for years to come these data are free and easy to access by anyone interested looking at the role of oceans in our daily lives i am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future

surface gravity waves at the surface of a fluid induce mass transport at the surface and in the fluid column below possibly the earliest result was given by Stokes who showed that periodic surface gravity waves induce a small forward drift the Stokes drift corresponding to the Lagrangian mean wave induced drift of an infinitesimally small tracer in the absence of Eulerian mean

flows while Stokes's result is a clear cut result on a second order effect associated with linear waves wave induced particle motions in the ocean are far more complex in reality wave induced particle motions can also arise because of Eulerian mean flows driven by wave groups in the turbulent surface boundary layer subsurface flows wave breaking infragravity waves the earth's rotation and the inertial dynamics of the particle itself

This reference book for researchers working on glacial sediments provides a complete overview of the various glacial deposits in the ocean it presents a collection of worldwide data on glacio marine phenomena

My work geochemistry of organic matter in the ocean first appeared in Russian in 1978 since then much progress has been made in the exploration of various forms of organic matter in the ocean dissolved colloidal organic matter suspended in particles and that contained in bottom sediments and in interstitial waters the appropriate evidence is found in hundreds of articles and several review works such as Andersen 1977 biogeochemie de la matiere organique a l'interface eau sedimentmarine 1980 Duursma and Dawson 1981 a great amount of new information has been obtained in the Soviet Union's scientific institutions on the composition and distribution in natural waters and bottom sediments of organic matter and its separate components playing a crucial role in the formation of the chemical and biological structure of the ocean and its productivity in the biogeochemistry of the elements and geochemistry of organic matter in the earth's sedimentary cover the areas of exploration have expanded over the past four and a half years to embrace many new little known regions including the Arctic seas in contrast to the three preceding decades the research has been focused on investigating the existing forms the distribution and accumulation of organic matter in near continental oceanic zones between land and sea and in river estuaries
